Sprint 2 AI Usage Log

Project: CareerConnect - Job Search and Application Tracking Platform

Sprint: 2

Responsible Person: Catalin-Ion Besleaga

Prepared: 2026-10-26

Repository: https://github.com/Ionnerss/CareerConnect

Integration branch: dev

Entry number: 1

Date: 2026-10-03 to 2026-10-04

AI tool/model: ChatGPT; GPT-6 Sol Medium

Task ID/Title: Resume upload recovery - PR #72

Purpose of AI Use: Debug an uncertain Supabase metadata save after a Storage upload; avoid losing a successful PDF when the insert response is lost.

Chat Link or Prompt/Response: https://chatgpt.com/s/t_6adff6d712f881918ac754f904bd9dca

AI-Suggested Content: Preserve the uploaded object while checking whether its database metadata was committed; distinguish a confirmed save, a confirmed miss, and an uncertain result; warn about duplicate retries rather than deleting a possibly valid resume.

Validation: PR #72 documents a normal upload, failed metadata save, simulated lost response, and verification-failure scenarios. No independent rerun was performed while preparing this log.

Decision: Accepted and adapted into the resume upload recovery flow. An unused file can remain after a confirmed database failure, a consciously retained limitation.

Reflection: An ambiguous network response is not proof a database write failed; destructive cleanup can turn an uncertain outcome into real data loss.

Responsible Person: Catalin-Ion Besleaga

GitHub work evidence: PR #72

Entry number: 2

Date: 2026-10-04 to 2026-10-07

AI tool/model: ChatGPT; GPT-6 Sol Medium

Task ID/Title: GitHub Actions CI and automated recovery tests - PR #74 / issue #73

Purpose of AI Use: Plan a repeatable CI gate and tests for authentication and resume recovery.

Chat Link or Prompt/Response: https://chatgpt.com/s/t_6adff65299448191a1a95b9095fd4dbc

AI-Suggested Content: Run lint, TypeScript checks, Vitest, and production build in CI; exercise a deliberately failing test; cover confirmed metadata, missing metadata, verification errors, and unexpected exceptions.

Validation: PR #74 records passing lint, typecheck, tests, build, a detected intentionally failing test, and a subsequent successful rerun.

Decision: Accepted; CI was added for pushes and pull requests targeting development/stable branches.

Reflection: A green CI result is useful only when the pipeline has proved it can catch failures.

Responsible Person: Catalin-Ion Besleaga

GitHub work evidence: PR #74

Entry number: 3

Date: 2026-10-07 to 2026-10-10

AI tool/model: ChatGPT; GPT-6 Sol Medium

Task ID/Title: Protected routes and signup error handling - PR #77

Purpose of AI Use: Review the boundary between session refresh, protected pages, and signup failures.

Chat Link or Prompt/Response: https://chatgpt.com/s/t_6adff7bd4c30819186505e8f1faaf957

AI-Suggested Content: Redirect signed-out visitors from protected pages, preserve refreshed cookies during redirects, reset loading state on signup errors, and add middleware/component tests.

Validation: PR #77 documents 14 middleware and 4 signup tests, 43 passing tests overall, plus lint, TypeScript, build, and manual redirect/signup checks.

Decision: Accepted and adjusted to the existing route and session architecture.

Reflection: Authentication success alone is insufficient: redirects, cookie updates and failure states also require tests.

Responsible Person: Catalin-Ion Besleaga

GitHub work evidence: PR #77

Entry number: 4

Date: 2026-10-12 to 2026-10-13

AI tool/model: ChatGPT; GPT-6 Sol Medium

Task ID/Title: Profile avatar/background image backend - PR #140 / issue #96

Purpose of AI Use: Plan image bucket configuration, allowed formats, validation and owner-scoped paths.

Chat Link or Prompt/Response:

https://chatgpt.com/s/t_6adff89688e481918236a560b6039a8b

https://chatgpt.com/s/t_6adff98faa8881919f0a8fabe82fd377

AI-Suggested Content: Use 5 MiB JPEG/PNG/WebP limits, validate file signatures and MIME types, keep paths under user-id/avatar or user-id/background, and update only the signed-in user's selected profile field.

Validation: PR #140 documents backend, SQL policies, path validation and tests; deployment details are recorded in the PR, not independently verified here.

Decision: Accepted, then extended in subsequent image-hardening PRs.

Reflection: A file type declaration is not enough; signatures, correct folder ownership and metadata consistency matter.

Responsible Person: Catalin-Ion Besleaga

GitHub work evidence: PR #140

Entry number: 5

Date: 2026-10-17

AI tool/model: ChatGPT; GPT-6 Sol Medium

Task ID/Title: GitHub Project PR automation - PR #158

Purpose of AI Use: Automate project-board status updates for new non-draft pull requests.

Chat Link or Prompt/Response:

https://chatgpt.com/s/t_6adff47b7b8481919cab796a4570f5ee

https://chatgpt.com/s/t_6adff47b7b8481919cab796a4570f5ee

AI-Suggested Content: Trigger on opened/ready-for-review PR events, authenticate with an appropriate Projects token, and avoid marking draft PRs as In Review.

Validation: PR #158 documents the workflow, credential setup and a planned real PR verification. It does not conclusively record the outcome of that manual verification.

Decision: Workflow was merged; production status behavior still requires confirmation if not tested afterward.

Reflection: Project automation needs both correct event triggers and GitHub Project permissions.

Responsible Person: Catalin-Ion Besleaga

GitHub work evidence: PR #158

Task ID/Title: Profile projects, links and private images - PR #184 / issue #107

Purpose of AI Use: Design related project/link/image tables and secure private project media access.

Chat Link or Prompt/Response:

https://chatgpt.com/s/t_6adff942912c819181beea29cd6e3904

https://chatgpt.com/s/t_6adffa7dd16881919fad84590ed6ed00

https://chatgpt.com/s/t_6adffa98d70081919f1ead6702898678

AI-Suggested Content: Use related tables with FK relationships, owner-restricted RLS, a private project-images bucket, validated image uploads, and short-lived signed links.

Validation: PR #184 records automated tests, passing CI, and manual project/link authorization and image checks.

Decision: Accepted and integrated with the existing profile infrastructure.

Reflection: Rich profile sections combine relational integrity with Storage permissions and failure recovery.

Responsible Person: Catalin-Ion Besleaga

GitHub work evidence: PR #184

Entry number: 7

Date: 2026-10-25 to 2026-10-26

AI tool/model: ChatGPT; GPT-6 Sol Medium

Task ID/Title: Employment-type job field - PR #214 / issue #131

Purpose of AI Use: Prepare the database and recruiter posting form for employment-type filtering.

Chat Link or Prompt/Response: https://chatgpt.com/s/t_6adffc24032c819180cf889de8bc8946

AI-Suggested Content: Add a nullable constrained employment_type column; permit Full-time, Part-time, Contract and Internship; connect job creation schema, service and form.

Validation: PR #214 documents migration, validator, insertion and recruiter form tests; merged into dev.

Decision: Accepted a separately tracked prerequisite for filtering.

Reflection: A new search filter needs consistent stored values before a frontend control can query it reliably.

Responsible Person: Catalin-Ion Besleaga

GitHub work evidence: PR #214

Entry number: 8

Date: 2026-10-25 to 2026-10-26

AI tool/model: ChatGPT; GPT-6 Sol Medium

Task ID/Title: Job submission, resume association and recruiter close/reopen - PR #217

Purpose of AI Use: Connect application UI to an authenticated Supabase insert and add job availability controls.

Chat Link or Prompt/Response:

https://chatgpt.com/s/t_6ae0034a03888191af5d02746a754deb

https://chatgpt.com/s/t_6ae0024d87888191a1ebfe4b6f3c846a

https://chatgpt.com/s/t_6ae002ef5990819184465a405cf9e120

AI-Suggested Content: Validate UUIDs, require an open job and the applicant's active owned resume, insert applicant_id/job_id/resume_id, handle uniqueness failures, and implement ownership-protected status changes.

Validation: PR #217 records application and posting status test coverage; I also reported locally that close/reopen controls worked. The current insert saves only job, applicant and resume references, not the extended form fields.

Decision: Accepted and integrated with the existing application-status UI.

Reflection: Database constraints and final-insert guards matter because a posting can close between a read and a write.

Responsible Person: Catalin-Ion Besleaga

GitHub work evidence: PR #217

Task ID/Title: Server-side job filtering - PR #223 / issue #131

Purpose of AI Use: Connect the existing filter UI to real Supabase queries while preserving pagination and validation.

Chat Link or Prompt/Response: https://chatgpt.com/s/t_6ae003d5d8c08191b9e6149757f3d347

AI-Suggested Content: Parse URL filters with Zod; apply location, salary and experience constraints and employment type before pagination; preserve search and selected query parameters.

Validation: I reported automated checks working while preparing the PR; GitHub shows PR #223 merged. The PR describes validator and search tests.

Decision: Accepted and implemented the query-based approach instead of UI-only filtering.

Reflection: Filtering after pagination produces misleading result counts and empty later pages.

Responsible Person: Catalin-Ion Besleaga

GitHub work evidence: PR #223

Entry number: 10

Date: 2026-10-26

AI tool/model: ChatGPT; GPT-6 Sol Medium

Task ID/Title: Recruiter applicant document access - PR #224 / issue #127

Purpose of AI Use: Analyze the dev branch, locate applicant/resume schema and implement secure View/Download controls.

Chat Link or Prompt/Response: https://chatgpt.com/s/t_6ae0040e4ed48191a6d27433caa31a3b

AI-Suggested Content: Extend applicant records with file-availability flags, add reusable document buttons and an authorized server service that signs short-lived resume/cover-letter links.

Validation: I reported applicant test success; GitHub Actions CI for PR #224 succeeded. No live cross-account Storage test is established by these sources.

Decision: Requested complete code and incorporated it into PR #224, then merged the PR.

Reflection: A recruiter should receive a signed URL only after verifying that the relevant application belongs to their own job.

Responsible Person: Catalin-Ion Besleaga

GitHub work evidence: PR #224

Entry number: 11

Date: 2026-10-26

AI tool/model: ChatGPT; GPT-6 Sol Medium

Task ID/Title: Optional PDF cover-letter attachment - commit 06d8cca

Purpose of AI Use: Design the post-submission document upload and a narrowly restricted application path update.

Chat Link or Prompt/Response: https://chatgpt.com/s/t_6ae0047e039481918c7b6b0bf8df67e0

AI-Suggested Content: Create the application first to obtain its ID; store a PDF under the applicant/application folder; validate upload and path; restrict updates to the owner and ensure status cannot be changed.

Validation: GitHub commit 06d8cca includes the actions, UI and migration; its recorded GitHub Actions CI run completed successfully. Live Storage/upload and cross-account authorization are not confirmed in the available record.

Decision: Applied a post-submission PDF attachment flow directly to dev with commit 06d8cca.

Reflection: The application ID is part of the Storage path, so document attachment naturally follows creation of the application record.

Responsible Person: Catalin-Ion Besleaga
